TECHECHELONS INFOSOLUTIONS | SOFTWARE DEVELOPMENT ENGINEER - 1
May 2022 - Present | Banglore / Pune, IN
- I am working as a Full Stack SDE Developer here with JavaScript and TypeScript at core.
- Also, have experience managing projects along with clients and guiding the trainees/team for successful delivery.

AYELITE TECHNOLOGIES | WEB DEVELOPER
Jan 2022 – Apr 2022 | Bhavnagar, Gujarat
- I have worked as a Web Developer here with Ionic at the core along with Angular and React for frontend and Node.js as backend.
- Also, worked with MERN Stack for web development.

MYEMMO | FULL STACK DEVELOPER
Delhi, IN
- Worked as Full Stack Developer and was directly involved in live project.
- I worked on Java Technology for backend and Android for frontend.Along with Java I used Spring and MongoDB for backend.

PROJECTS

SPIRITUAL APP
This project was an app where people register/join to get live guidance in their spiritual journey. It's frontend app was in Flutter and backend was built using NodeJS with MongoDB as database.
• My role here included whole backend work as its head of operations along with the responsibility of deployment and other.
• All functionalities in this included role-based authorization along with custom authority transfer to different user within each roles.

CRYPTOVERSE
A React based platform related to crypto currency where people can come and get the real time information related to different crypto-currencies like their valuations, market cap, and other things while comparing with other currencies along with a chart based interface.
• Also has a separate blog section for blogs related to crypto technologies. State management for this whole react project was done extensively by using Redux and Redux-Saga at core.
• My role here included building whole site with development, state management, testing and developement.

INDIA FIRST
App Link
This project was build with Android as frontend and Firebase as backend for making people aware of the day-to-day foreign products they use in their household and inform them about it's Indian alternative products.

BIKER
This project was a college project as Garage Customer service app with Android as frontend and Django as backend. Customer can search and book through all service providers in their locality.
